Set No. 1

IV B.Tech. I Semester Regular Examinations, November 2010
INFORMATION SECURITY
(Information Technology)

Time: 3 Hours Max Marks: 80

Answer any FIVE Questions
All Questions carry equal marks
****

1. (a) List out the components of an Information Security System. Explain about the same.
   (b) How is packet blocking and route table modification is done as part of TCP session hijacking?

2. (a) What is the difference between link and end-to-end encryption?
   (b) Differentiate MAC and Hash function. Discuss the basic uses of hash function.

3. (a) What requirements are not satisfied by version 2 of X.509. How version 3 address all these?
   (b) Explain how a signature is signed and verified in Digital Signature Algorithm(DSA)?

4. (a) Write the steps in creating a signed data MIME entity. Give an example
   (b) Explain with an example about "Multipart/alternative subtype" of MIME.

5. (a) How does anti replay window determine whether an inbound AH or ESP packet is a replay or not?
   (b) What is a Security Association? What are the different approaches in bundling SA's?

6. What are the business requirements for SET? What actions are performed after the merchant receives the purchase request message? Explain with a diagram.

7. (a) Explain how proxy accommodates devices that do not implement SNMP?
   (b) Discuss SNMPV1 administrative concepts.

8. (a) List and briefly define four techniques used to avoid guessable passwords
   (b) Explain how the behavior of an intruder can be found? In to what categories are intruders classified into?

Set No. 2

IV B.Tech. I Semester Regular Examinations, November 2010
INFORMATION SECURITY
(Information Technology)

Time: 3 Hours Max Marks: 80

Answer any FIVE Questions
All Questions carry equal marks
****

1. (a) What is cryptography? Discuss the authentication models used in cryptography.
   (b) What are stack based buffer overflows? How does the attacker exploit stack overflow?

2. (a) How is key distribution done? Explain briefly.
   (b) Explain the various steps involved in the HMAC algorithm

3. (a) Illustrate with an example the process involved in RSA algorithm
   (b) Describe the properties of Digital Signatures.

4. (a) Explain how PGP message generation is done with a neat diagram?
   (b) In PGP scheme, how many types of keys are used? What are they? How are they stored?

5. (a) Distinguish between the two modes of IPSec.
   (b) Define ESP and explain the security services it provides.

6. What is a session? What are the steps followed by communication peers in a session? Describe the messages realized by the above steps in SSL Handshake Protocol.

7. (a) Give the architecture of Network Management protocol. Illustrate the protocol context of SNMP.
   (b) What is a proxy? Give the protocol architecture of a proxy.

8. (a) Explain about packet filtering router. Mention some packet filtering rules that are based on information contained in the network packet.
   (b) List the weakness of packet filtering router.

IV B.Tech. I Semester Regular Examinations, November 2010
INFORMATION SECURITY
(Information Technology)

Time: 3 Hours Max Marks: 80

Answer any FIVE Questions
All Questions carry equal marks
****

1. (a) List out the different Attacks caused in the security. Explain any 6.
   (b) What are the tools available for session hijacking? Explain briefly how they work?

2. (a) Describe HMAC algorithm with neat diagram. What are its benefits over other hash algorithms?
   (b) State the job of key Distribution Centre in Public Key Cryptography

3. Describe the authentication dialogue used by Kerberos for obtaining required services. Compare and contrast Kerberos version3

4. (a) What is S/MIME? Explain the different header fields included in S/MIME.
   (b) How does the recipient know which of its public key was used to encrypt session key?

5. (a) List the different fields of Authentication Header. Describe the scope of authentication in Tunnel mode and transport mode.
   (b) Write about the features of ISAKMP.

6. (a) What is a dual signature and what is its purpose? How is it constructed?
   (b) List and give the purpose of four protocols in SSL.

7. (a) Describe the SNMP operations GetRequest, GetNextRequest, GetRequest with Indices with examples.
   (b) Discuss the functional enhancements that have been made in SNMP v2.

8. (a)What is a firewall? List the characteristics of a good firewall implementation.
   (b) What is the use of audit record in intrusion detection?

Set No. 4

IV B.Tech. I Semester Regular Examinations, November 2010
INFORMATION SECURITY
(Information Technology)

Time: 3 Hours Max Marks: 80

Answer any FIVE Questions
All Questions carry equal marks
****

1. (a) What is repudiation? How can it be prevented in real life?
   (b) Describe about execute payload for preventing stack dumping.

2. (a) What are the approaches to message authentications? Describe briefly about the same.
   (b) Explain cipher Block chaining mode with a diagram.

3. (a) Using RSA scheme, let p=809, q=751 and d=23. Calculate the public key e.
   (b) List the security services provided by a digital signature. Compare and contrast a conventional signature and a digital signature.

4. (a) Illustrate with a neat diagram the steps in extracting the information at the receiver site in PGP.
   (b) What is meant by transfer encoding? Explain MIME transfer Encodings.

5. (a) List the ISAKMP payload types and the purpose of each type.
   (b) Give the architecture of IPSec. Write the applications of IPSec.

6. What are the features of SET? Show diagrammatically how the customer makes a purchase request to the merchant.

7. What are the key elements of SNMP model? What is the relationship among the different versions of SNMP? Mention a few drawbacks of SNMP protocols with respect to network security.

8. (a) What are two default policies that can be taken in a packet filter if there is no match to any rule? Which is more conservative? Explain with example rule sets both the policies?
   b) What are false negatives and false positives?
