Code No. N0525 **R07** **Set No.1**

IV B.Tech I Semester Regular Examinations, November, 2011

SOFTWARE PROJECT MANAGEMENT

(Common to Computer Science & Engineering and Information Technology)

Time: 3 hours **Max. Marks: 80**

Answer any FIVE Questions
All Questions carry equal marks
*****

1. a) Define software process model. Explain waterfall model in theory. [8]
   b) Describe five parameters, three generations and ROI of software economics. [8]

2. a) How to achieve good quality? Explain. [8]
   b) What are the principles of modern software management? Explain. [8]

3. a) What are primary objects of lifecycle phases? [8]
   b) Explain about engineering artifacts. [8]

4. Discuss in detail about model-based software architecture. [16]

5. a) Explain about evolutionary WBS's. [8]
   b) Describe minor milestones and periodic assessments. [8]

6. a) Discuss in detail about SCO and CCB. [6]
   b) What are default roles in a software line-of-business organization? [5]
   c) Describe evolution of organization. [5]

7. a) What are the basic characteristics of a good metric? Explain. [5]
   b) Describe process discriminators that result from differences in stakeholder metrics. [5]
   c) Give an overview on seven core metrics. [6]

8. Discuss in detail about demonstration-based assessment of CCPDS-R case study. [16]

IV B.Tech I Semester Regular Examinations, November, 2011

SOFTWARE PROJECT MANAGEMENT

(Common to Computer Science & Engineering and Information Technology)

Time: 3 hours **Max. Marks: 80**

Answer any FIVE Questions
All Questions carry equal marks
*****

1. a) Write and explain Industrial software metrics top 10 list. [8]
   b) Explain about pragmatic software cost estimation. [8]

2. a) Write principles of conventional software engineering. [8]
   b) How to improve team effectiveness? Explain. [8]

3. Discuss in detail about the artifact sets. [16]

4. a) What is a model? Explain about a technical perspective of model-based architectures. [8]
   b) Write a table that shows the allocation of artifacts and the emphasis of each workflow in each of the life-cycle phases. [8]

5. a) Describe conventional WBS issues in detail. [8]
   b) Discuss about major milestones. [8]

6. a) Explain about line-of-business organizations. [8]
   b) Describe infrastructures and stakeholders environments. [8]

7. a) What are the parameters of earned value system? [5]
   b) Describe MTBF and maturity. [6]
   c) Explain process discriminators that results from differences in project size. [5]

8. Explain core metrics of CCPDS-R case study in detail. [16]

IV B.Tech I Semester Regular Examinations, November, 2011

SOFTWARE PROJECT MANAGEMENT

(Common to Computer Science & Engineering and Information Technology)

Time: 3 hours **Max. Marks: 80**

Answer any FIVE Questions
All Questions carry equal marks
*****

1. a) What constitutes a good software cost estimate? Explain predominant cost estimation process. [8]
   b) Describe conventional software management performance. [8]

2. a) Discuss about object oriented methods and visual modeling. [8]
   b) What are three levels of processes and their attributes? Explain. [8]

3. a) Discuss in detail about test artifacts. [8]
   b) Explain about pragmatic artifacts. [8]

4. a) Describe the workflow of iteration. [8]
   b) Explain about a management perspective of model-based software architecture. [8]

5. a) Explain about cost and schedule estimating process. [6]
   b) Describe the iteration planning process. [5]
   c) Discuss about minor milestones. [5]

6. Discuss in detail about process automation. [16]

7. a) Explain process discriminators that result from differences in process flexibility. [5]
   b) What are pragmatic software metrics? Explain. [6]
   c) What are quality indicators? Explain. [5]

8. Give process overview of CCPDS-R in detail. [16]

Code No. N0525 **R07** **Set No.4**

IV B.Tech I Semester Regular Examinations, November, 2011

SOFTWARE PROJECT MANAGEMENT

(Common to Computer Science & Engineering and Information Technology)

Time: 3 hours **Max. Marks: 80**

Answer any FIVE Questions
All Questions carry equal marks
*****

1. a) Discuss about waterfall model in practice. [8]
   b) Explain in detail about software economics. [8]

2. a) Describe reuse and commercial components. [8]
   b) Explain about transitioning to an iterative process. [8]

3. a) Draw a typical sequence of artifacts across the life-cycle phases and explain. [8]
   b) Explain deployment set. Distinguish between implementation set and deployment set. [8]

4. a) Discuss about different views of UML diagrams. [8]
   b) Explain software process workflows. [8]

5. a) What is WBS? Explain pragmatic planning. [6]
   b) Draw a figure that gives a typical sequence of life-cycle checkpoints. Explain. [5]
   c) Describe life-cycle architecture milestone. [5]

6. a) Discuss about change management in detail [8]
   b) Describe project organizations with a neat diagram. [8]

7. a) Explain budgeted cost and expenditures of management indicator. [6]
   b) Describe life-cycle expectations. [5]
   c) Discuss about scale in process discriminants. [5]

8. Explain the following:
   a) Continuous integration [4]
   b) Early risk resolution [4]
   c) Modern software economics [4]
   d) Denouement [4]
